

**A Letter from Chuck L. Abraham  
Chief Executive Officer, OraMetrix**

Release date: January 19, 2014

To the suresmile Community,

First, I want to thank each of you for your support of suresmile. You've shared the vision and are bringing a higher standard of care to your patients. You've seen the future of our industry and you know it's a digital one. You are a leader in Orthodontics and you are making a difference every time you deliver better, faster care to a patient.

I am very pleased to tell you about the introduction of suresmile 7.0, the next generation of the suresmile treatment management system, coming this fall. This new version includes the most significant changes we have made in the past ten years. It will enable us to provide benefits to you that no other system in the world can provide. Some of these benefits include:

1. Complete access to your patient treatment system from anywhere, at any time, via internet connectivity
2. A new, easier to navigate, more intuitive user interface that includes the benefits associated with web browser technology, including the ability to use it on multiple computer platforms
3. The elimination of the server and required static IP address to ease practice integration, especially in multi-site settings
4. A true professional collaboration platform for surgical, restorative, and cosmetic cases or any case in which you want to involve another professional in your planning and design process.

In the future, suresmile 7.0 will provide a powerful platform for marketing communications to patients and referring GPs. It will enable you to extend your reach with consulting services and shared educational experiences with other doctors.

In summary, 7.0 moves beyond the delivery of superior clinical treatment and into a new realm, enabling new ways to grow your practices and profit from the superior skills you have developed. We are tilting the field of competition in your favor.

We've never been more focused as a company than we are now to make your transition to 7.0 smooth. And we are always open to any comments, thoughts and ideas you may have with regard to how we can make the system and process even better. Please don't hesitate to give me a call if you have any questions or comments.

In the meantime, expect great things.

Warmest regards,

Chuck L. Abraham
